MIRAGE LIGHT LTE™

TYPE II AMBULANCE

The nimble and astoundingly efficient Mirage Light LTE™ is proof that form should always follow function. Its aerodynamic sculpting slices the air while its raised roof made exclusively of light composite materials lowers the center of gravity and improves handling. And with 1,900 lb. of payload capacity, this workhorse offers the power and performance to get the job done!

RAISED ROOF

Gone are the days of heavy-duty steel tubing roof cages, longitudinal reinforcements and stringers, perimeter roof rails, and steel gussets! The aerodynamic roofline of this Type II ambulance is made of lightweight, yet incredibly strong honeycomb composite and fiberglass. Its exclusive one-piece construction lightens the unit at its highest point, thereby lowering the center of gravity and improving road handling. It also offers optimal protection in the event of accident or rollover.

EMERGENCY LIGHT SYSTEM

Strobe, halogen, LED, or rotator lights provide top visibility thanks to the largest surface area in the industry and the thermoformed and sealed lenses.

HEADS-UP CONSOLE

The fully Ford QVM-approved heads-up console is one of the most ergonomic in the industry—and one of the safest! It is designed to limit distractions and keep the driver's eyes focused on the road.

CABINERY

Cabinets are constructed of anodized aluminum alloy extruded framing with ABS-molded compartments and feature fully adjustable sliding shelf dividers. The lightweight materials significantly increase payload capacity without sacrificing overall structural strength. Exclusive construction methods also eliminate all sharp edges and corners, while smooth ABS finishes help fight infection and speed the cleaning process.

SAFETY NET

A removable safety net at the module's front end restrains occupants in case of accident or severe riding conditions.

TRASH CONTAINER

The "EZ-Flip" trash is foot activated in case attendants have soiled hands.

FOREWARN LIGHTS & SPEAKERS

Each Ford-chassis Mirage Light comes standard with a matching fiberglass front grille with integrated emergency lights and siren speakers.

DIMENSIONS MIRAGE LIGHT LTE™

OVERALL	232 x 84 x 96 IN
PAYLOAD CAPACITY	1900 LB
INTERIOR DIMENSION	63 IN HEADROOM
